

I am a long time customer of XM radio and enjoy the ability to listen to important news, weather when I visit other cities, which is on a regular basis. In fact, I was recently traveling to the area where the severe weater and tornados were present. I used the XM radio city weather and traffic to learn of the threats and avoid them.

I urge you to reject the NAB's petition 04-160 restricting the public's access to this important and critical information. Please continue to allow XM to broadcast this important information for the American public.

Thanks,

Steve Davis
